Shown with combat equipment.

Easy access to release tab (yellow with red beads).
Modular Airborne Weapons Case (MAWC)

- MAWC is equipped with a single attachment point which can be adjusted vertically
- Lowering Line can be attached with rubber bands or MOLLE pouch

- The MAWC is capable of being folded up to reduce the width to 8” (small) and 11” (large)
- Lower tie down strap stowed in pocket
- 1” Field repairable buckles

- Fully adjustable, designed to carry up to a M249 with standard butt stock (small) and M204B (large)
- Easy access to weapon

- 1” PALS webbing on the interior to accommodate Modular Lightweight Load-carrying Equipment or be used as a tie down for Hollgan Breaching Tool, Bi-Pods, Tri-Pods,......
Modular Airborne Weapons Case (MAWC)

- Each size case has a handle capable of carrying up to 65 lbs (small) and 80 lbs. (large)
- MAWC is completely padded with the ability to add padding in the optics area. Foam, bubble wrap...... can be used. Pocket has a hook and pile closure.

- Adjustable sleeve is secured with 2” hook and pile and adjustment straps located inside case
- Center buckle is used to tighten flap
Features

- Tested by USASOC
- Purchased by two US Army units
- Easily maintainable
- No additional equipment needed for repairs
- JMPI's similar to M1950
- Donning and post opening procedures similar to the M1950. Very little cross training needed.
- Highly adjustable. Can be jumped with 5th to 95th percentile personnel
- Can be operated with heavy winter mittens.
- Easy access to weapon and accessories. Under 10 seconds
- Heavily reinforced for heavy weapons and accessories

Maintenance

- The MAWC was built so there are no removable parts, therefore there are no parts to lose
- Repairs and maintenance are similar to the M1950 and AIRPAC. Standard 301 lock-stitch sewing machines needed to repair. All threads used are common (E, FF, 3, 5 and 6 cord).
- Maintainable by MOS 92R
- When submerged in salt water, rinse several times in fresh water and hang to dry out of direct sunlight.
